

Sealex Industries

Waterproofing Systems, Sealers & Sealants

PU-65
High Tensile

The New Generation ***In Waterproofing Membranes***

Tough

• High tensile strength

Fast Cure

• 4 hour cure

Flexible

• Class 3 Rated

Certified

• CSIRO approved

Quality

• Up to 15 year warranty

UV Stable

• Internal & External

Engineered Excellence

Sealex Industries

Waterproofing Systems, Sealers & Sealants

The Sealex PU-65 11 / 11 Advantage!

Rate your current membrane against the following and give it a mark out of 11 below.....

1. The force of cohesion is greater than the force of adhesion?

- ✓ If a hairline crack was to develop within the concrete slab itself, the PU65 membrane would lift away from the concrete at the point of failure but remain intact and will not split. It does not matter how great the elongation of a membrane is, many membranes on the market today will and do split were shrinkage cracking occurs because they do not have this feature built in.
- ✓ Has a tensile strength equal to many solvent based polyurethanes.

2. The Product has a self correcting flow agent?

- ✓ The product will automatically adjust itself after application smoothing out brush marks and imperfections in the membrane coating
- ✓ The differences in thickness in a coat over the area of the applied membrane will be about 25% rather than 100% that is found with many other membranes on the market today.
- ✓ Less membrane is used making possible to apply the system @1.00mm dry film thicknesses.
- ✓ Any air bubbles that may form within the thickness of the coating are forced to the surface, thus producing a totally continuous film.

3. Manufactured with Special State of the Art Resins High quality resins?

- ✓ Able to resist the effects of the highly alkaline environment that is present were sand and cement screeds.
- ✓ The highly alkaline environment found were lime, cement, and moisture are present is highly corrosive and is a major cause of premature failure of under tile membranes. This is not tested by most manufacturers of membranes today.

4. High UV stability?

- ✓ Tested on a QUV for 2000 hours

5. Fast Track Cost Effective system?

- ✓ Bathrooms can be completed in a single day
- ✓ No reinforcing materials needed saving time and money
- ✓ 10 sqm/15L pail

6. Environmentally safe?

- ✓ Gecko Green star rated
- ✓ No harmful solvents and chemicals
- ✓ Water clean up

7. Applicator friendly?

- ✓ No carcinogenic solvents
- ✓ Fast - track system saving time and money
- ✓ Can be sprayed from airless spray machine

8. Multiple application and product use?

- ✓ Internal/External wet areas*
- ✓ Retaining walls*
- ✓ Roof tops*
- ✓ Small ponds and Water features*
- ✓ Garden & Planter boxes*

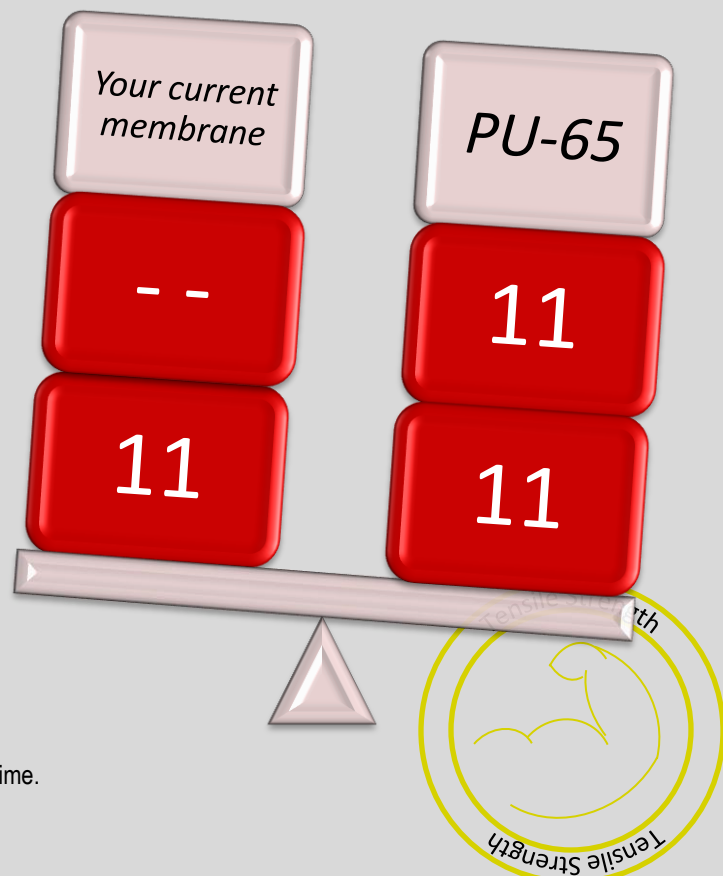

9. Long extended warranty?

- ✓ Some project can qualify for 15 years

10. Advanced quick dry Curing formulation?

- ✓ Will outperform a solvent based product in curing and drying time.

11. Compatible with many common Tile adhesives?

The New Generation

In Waterproofing Membranes

In & out in one day

3. Sealex PU65

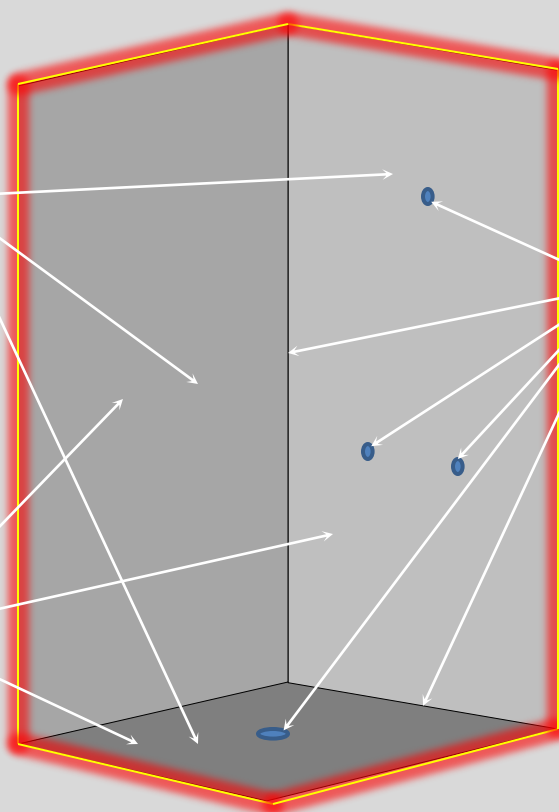

High tensile single part fast
cure membrane

No reinforcing

Re coat up to 4 hours

1. Sealex Uniprime

single part fast cure
membrane primer
Wait 20 min before
coating .

2. Sealex SC600

Neutral Cure

Silicone 600ml

Sausage

In all joints, gaps &
plumbing terminations,
wait 20 min before
coating.

3 products to complete a waterproofing project*

3 products to complete a project excludes crack treatment, moisture issues & surface imperfections.
